MAKING ICT WORK

EXPERIENCE & VISION

WHAT WILL 3E's OFFER?

EDUCATIONAL & TECHNICAL ICT CONSULTANCY

OUR APPROACH

QUALITY CONTROL

Making ICT Work

3E's are unique in being able to offer experienced consultants in both Educational and Technical ICT. Our holistic approach will ensure that your choice of ICT systems will be fully integrated and effective for your needs.

Experience and Vision

Our team has successfully managed the effective implementation of ICT into The Business Academy Bexley, The City Technology College Kingshurst, Kings College for the Arts and Technology, Kings International College and many more. Our considerable experience in this field has provided us with unique understanding of the needs of the schools. As a result we have developed methods to support, implement and manage highly effective and scalable educational ICT systems.

ICT plays a key role in transforming and supporting teaching, learning, management and administration in Academies. As such, Academies need considerable support in procuring and implementing ICT that will be part of an empowering, supportive environment for learning and working. Our educational ICT consultants are dedicated teachers, with many years experience of using, delivering and developing ICT in the classroom.

We understand the needs of teachers, students, and support staff and the importance of developing a system that meets the specific ethos of each Academy. We fully support the statement that the Academy vision drives the solution, not the technology or technologists.

It is imperative that education is at the heart of the design process for all aspects of the learning and working environment that an Academy will offer. The role of our team will be to facilitate and guide Academy staff, ensuring that the right decisions are made, and that the ownership of the solution remains with the Academy, not its consultants, advisors or individual staff members.

"Ensuring students and teachers gain real and tangible learning and teaching benefits from the use of ICT tools"

your vision realised
